

YOUR NOTES

YOUR SITE, YOUR DOMAIN

Claude Code for Non-Developers: build your own website and publish it on your domain

Turn your notes into a fast one-page site, check every claim on it, and publish it on your own domain with HTTPS and a contact form that lands in your inbox, without writing code.

07 **Change it yourself**
in the full guide

08 **Troubleshooting**
in the full guide

This free sample contains chapter 01. The full guide has all 8 chapters, plus the prompt library and the checklist.

The promise. Over a weekend, Claude Code turns your notes into a **fast one-page site**, you **check every claim on it**, and it goes live on **your own domain with HTTPS** and a **contact form that lands in your inbox**. No page builder, no plugins, nothing loaded from other companies. You give clear instructions and check the results; Claude Code writes the code.

Licence. This is a free sample. You are welcome to share it as it is.

Examples. Ochtendlicht Yoga and its teacher are fictional. The build is real: on 17 November 2026 a separate Claude Code session built the site from this guide's prompts, and it was published live on a test address, tested and deleted again. Class prices are left out of the examples on purpose. Real studies are cited with their source.

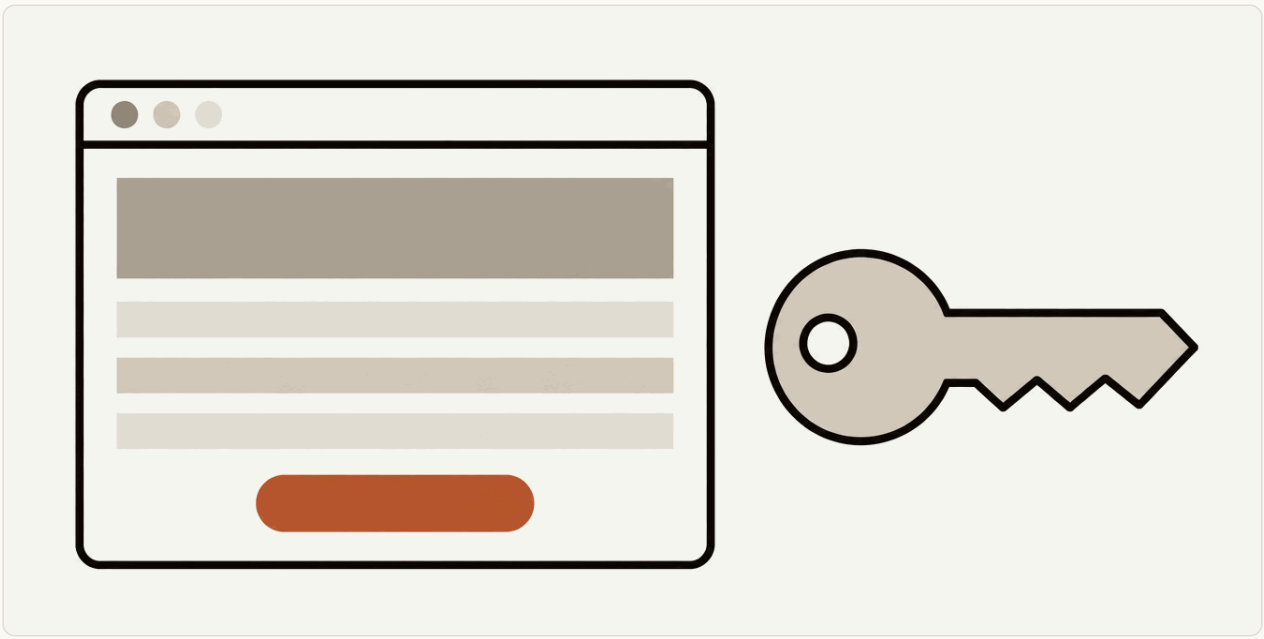

Tools change. AI products update often. If a screen looks different from the one described, the method still applies; owners get free updated versions in their library.

CHAPTER 01

Your own site: is Claude Code right for this one?

Most people who need a website need one good page. It says who you help, shows why they can trust you, and makes one thing easy, such as booking a first lesson or asking a question. This guide has Claude Code build that page from your own notes, and publish it on your own domain, without you writing any code.

YOU'LL HAVE	A go or no-go for building your own page, and what that page has to achieve
TIME	15 minutes

What one good page must do

A visitor decides within moments whether a page is for them. The page has three jobs:

- **Say who it's for,** in the first line.
- **Prove it:** your training, your experience, what other people say. Only what you can stand behind.
- **Make one action easy:** one button, one form, always in reach.

It also has to work for everyone. In the 2026 WebAIM Million scan of the top million home pages, **95.9%** had accessibility failures a computer could detect. The most common were text with too little contrast (83.9% of pages), images without a text description (53.1%) and form fields without a label (51%). Your page will be checked for all three.

Do you need to build a site at all?

IF WHAT YOU NEED IS…	USE…	WHY
To be found on maps and in local search	A free Google Business Profile, first	Many local customers never get past it
To drag and drop the design yourself and pay monthly	A page builder such as Squarespace, Wix or Carrd	Easy to edit, but it's their platform and their fee
A busy blog with several writers	WordPress	Built for that; plugins and updates come with it
A shop with checkout	A shop platform	Payments, stock and tax are their job
One fast page you own, change by asking, and that loads nothing from other companies	**Claude Code: this guide**	Plain files, nothing to update, and you keep everything

Getting recommended by AI assistants such as ChatGPT is a separate job, covered in Guide 1 of this series. A clear, fast page is the foundation for both.

WHAT WE BUILT FOR THIS GUIDE

Our worked example is *Ochtendlicht Yoga*, a fictional yoga teacher in Leiden. A separate Claude Code session built the page from her notes, with the prompts in this guide, and published it on a live test address of our own domain. We tested the form with a real email, measured the page with Google's tools, and deleted it all again.

WHAT NEXT

Get the full guide

You've read the first chapter. The full guide takes you through all 8 chapters of the build, step by step, with every prompt ready to copy and a checklist to work from.

02 **Set up safely**
Privacy setting, the app, a project folder, and house rules that keep other companies off your page.

03 **Plan the page and write it truthfully**
A one-page plan by interview, text written only from your notes, and a check of every claim in a fresh session.

04 **Build it, and check it on phone and laptop**
A plan you approve, a page built step by step, and checks for speed, contrast, labels and outside requests.

05 **A contact form that reaches your inbox**
A form that stores nothing, stops spam without outside services, and sends each message straight to you.

06 **Publish on your own domain, with HTTPS**
The domain, the one email condition to check first, a publish you approve, and live tests including a real message.

07 **Change it yourself**
A ten-minute routine for every change, and when this page is no longer the right tool.

08 **Troubleshooting**
The snags we hit, and the ones you're most likely to hit.
